

Abstract Submitted
for the 4CF10 Meeting of
The American Physical Society

VERITAS Observations of Galactic Sources GARY FINNEGAN,
University of Utah, FOR THE VERITAS COLLABORATION — The Milky Way
Galaxy is full of violent activity. Stars that go super nova have left permanent scars
on the arms of the Galaxy. The VERITAS collaboration has observed some of these
scars, otherwise known as super nova remnants or pulsar wind nebulae. In this talk
I will give an overview of some of the newest gamma ray detections in the Galaxy
by VERITAS.
