

Abstract Submitted  
for the 4CF10 Meeting of  
The American Physical Society

**The Telescope Array Experiment** BENJAMIN STOKES, University of Utah, TELESCOPE ARRAY COLLABORATION — The Telescope Array (TA) is an ultra-high energy cosmic ray (UHECR) detector located in Millard County, Utah. The detector currently consists of a ground array of approximately 500 scintillator counters and three optical air-fluorescence stations. TA has now been fully operational for over two years and currently has the largest aperture for UHECRs in the Northern Hemisphere. Current analysis efforts will be discussed and recent findings will be presented.
