

Abstract Submitted
for the 4CF11 Meeting of
The American Physical Society

Anisotropy studies at the Galactic Center with the Pierre Auger Observatory SARA MUELLER, MIGUEL MOSTAFA, Colorado State University, PIERRE AUGER OBSERVATORY COLLABORATION — Anisotropy studies in the direction of the Galactic Center at EeV energies were studied using data from the Surface Detector of the Pierre Auger Observatory. Data from January 2004 until August 2011 showed no significant excesses above 1 EeV, for zenith angles below 60° based on the analysis at small angular scales.
