Abstract for an Invited Paper
for the 4CF12 Meeting of
the American Physical Society

Science at 100 Tesla

NEIL HARRISON, Los Alamos National Laboratory

Within the last year, Los Alamos National Labs produced magnetic fields of 100 tesla strength non-destructively for the first time. Fields of such a strength open up many new possibilities for condensed matter research. I will present some recent examples of condensed matter physics experiments performed in magnetic fields reaching 100 tesla, which includes recent work on high temperature superconductivity, magnetism and low dimensional materials.
