Searching for Supersymmetry with Higgs Bosons at the LHC

KEITH ULMER, Univ of Colorado - Boulder

The Large Hadron Collider (LHC) at CERN currently provides the highest energy particle collisions ever produced in a laboratory. These collisions were reconstructed and analyzed by the CMS and ATLAS experiments to claim the discovery of the Higgs Boson in 2012, thus completing the standard model of particle physics. This talk presents searches for physics beyond the standard model at CMS where the newly discovered Higgs Boson is being used as a search tool to probe even deeper for evidence of supersymmetry and dark matter.
