## Abstract Submitted for the APR05 Meeting of The American Physical Society

On a New Theory of Physical Vacuum TEMUR Z. KALANOV, Home of Physical Problems, Pisatelskaya 6a, 700200 Tashkent, Uzbekistan — A new theory of physical vacuum is proposed. This theory is based on the principle of unity of formal logic and dialectics. It is shown that physical vacuum does not represent system of material objects, not consist of particles, fields, bodies and is neither a particle, nor a field, nor a body. Therefore, vacuum has no properties (for example, energy, size) and, hence, does not interact with the objects of Nature. It means that both measure of vacuum energy and measure of vacuum information are equal to zero. Physical vacuum is matter in the state of absolute zero of energy and information. Thus, the new theory represents the philosophical solution of the problem of physical vacuum. This philosophical solution is the unique-permissible, rigorous, complete, general theoretical proof of existence of physical vacuum.
