Abstract for an Invited Paper  
for the APR05 Meeting of  
the American Physical Society

**Scientific Integrity in Washington: Politics Trumps Science?**

LAWRENCE KRAUSS, Case Western Reserve University

Numerous documented examples exist in which the current administration has either censored or distorted the recommendations and/or the results of government scientific advisory panels and agencies, or has interfered with the makeup of scientific advisory panels for apparently political purposes. These instances seem more broad ranging than any recent administration, republican or democrat, and have continued despite various public outcries. I will describe several examples from the physical sciences, and the biological sciences, and then discuss what we might do as a community to encourage the administration in its second term to work to ensure that politics does not trump science.
