Abstract for an Invited Paper
for the APR06 Meeting of
the American Physical Society

When Particle Physics Confronts Cosmic Ray Data

ANGELA OLINTO, University of Chicago

The origin of the highest energy particles ever to be observed is still a mystery. They are messengers of an extreme universe and they test the limits of physical laws. The largest cosmic ray experiments are starting to probe the extremely high-energy region where pointing to cosmic ray sources is feasible and a long awaited Greisen-Zatsepin- Kuzmin feature in the spectrum is expected. Past experiments have claimed opposing results. The mystery of ultra-high energy cosmic rays will be reviewed in light of the first results from the Pierre Auger Observatory. Auger is under construction, yet first results have already challenged previous views of the physics of ultra-high energy cosmic rays.
