Measurement of $B(\bar{B}^0 \rightarrow \Lambda^+_c \bar{p})$ at BaBar

STEPHANIE A. MAJEWSKI, Stanford University, BABAR COLLABORATION — We present a branching fraction measurement for the decay $B^0 \rightarrow \Lambda^+_c \bar{p}$ in a sample of 232 million $B\bar{B}$ pairs collected with the BaBar detector at the PEP-II $e^+e^-$ storage rings at SLAC. Studies of these charmed baryonic $B$ decays provide a way to check various theoretical models and aid in predicting the branching fractions of their charmless counterparts.
