

Abstract Submitted
for the APR06 Meeting of
The American Physical Society

Lepton-flavour violating decays, $\tau \rightarrow l\pi^0/\eta/\eta'$ SANJAY SWAIN,
Stanford Linear Accelerator Center, BABAR COLLABORATION — Searches for
lepton-flavor violating decays of τ leptons will be presented, with emphasis on chan-
nels lM^0 where l is an electron or muon and M^0 is a π^0 , η or η' meson. The analyses
use data collected in e^+e^- collisions at a centre-of-mass energy of 10.58 GeV with
the BABAR detector at the PEP-II storage rings.
