

Abstract Submitted
for the APR06 Meeting of
The American Physical Society

Investigation of $D^+ \rightarrow \tau^+\nu$ NABIL MENAA, Syracuse University,
CLEO COLLABORATION — Using data taken with the CLEO-c detector at the
 $\psi(3770)$ resonance, we compare our recent measurement of $\mathcal{B}(D^+ \rightarrow \mu^+\nu)$ with
 $\mathcal{B}(D^+ \rightarrow \tau^+\nu)$. The ratio of branching ratios should be 2.65 in the Standard Model
with any deviation indicating a breakdown of lepton universality.
