**Hadronic Decays for the  $B_s$  Oscillation Measurement at DØ** GER-  
NOT WEBER, Institut fuer Physik, Mainz, Germany, DZERO COLLABORATION  
— The status of the measurements of hadronic  $B_s$  decays at the DØ experiment at  
Fermilab is presented. DØ limits of the mass difference  $\Delta m_s$  in the  $B_s$  system have  
been obtained so far using semileptonic decays. Due to the fact that in hadronic  $B_s$   
decays all daughter particles are reconstructible a much better sensitivity for larger  
 $\Delta m_s$  values is expected here. Results of the present performance of the triggering  
strategy and reconstruction of hadronic  $B$  decays will be shown.
