$B^+ \rightarrow D^0 K^+$ decays at CDFII PAOLA SQUILLACIOTI, University of Siena, CDF COLLABORATION — The measurement of BRs and asymmetries of $B^\pm \rightarrow D^0 K^\pm$ modes is a theoretically clean method for the determination of the CKM angle γ . We present first results of the analysis of these modes at a hadron collider, from a sample of 360 pb^{-1} of data collected with the CDFII detector at the Tevatron collider at Fermilab.
