Measurement of the Top Quark Mass at DØ using Dilepton Events JOERG MEYER, DZERO COLLABORATION — We report on a measurement of the top quark mass using $t\bar{t}$ candidates in the dilepton final states. The kinematics of these events are solved for a range of assumed top quark masses, and the relative likelihood of each solution is assessed. Information from the complete set of events is combined in a maximum likelihood fit to extract the top quark mass and its uncertainty.
