The American Physical Society

Study of $B \rightarrow K^*ll$ decays with BaBar JENNIFER WATSON, University of Edinburgh, BABAR COLLABORATION — Measurements of the FCNC decay $B \rightarrow K^*ll$ allow for sensitive tests of the Standard Model due to possible New Physics contributions in the interference between penguin and box diagrams. Results from BaBar on the forward-backward lepton asymmetry and K^* polarization are presented. The study of additional angular variables and the extension of the analysis to inclusive $b \rightarrow sll$ decays are also discussed.
