A Measurement of the Photon Energy Spectrum in $b \to s\gamma$ Decays

LUKE WINSTROM, University of California, Santa Cruz Institute for Particle Physics, BABAR COLLABORATION — The photon spectrum in the $B \to X_s\gamma$ decay, where $X_s$ is any strange hadronic state, is studied using a data sample of $BB$ decays collected from 1999-2006 with the BaBar experiment. The spectrum is used to measure the partial branching fractions and the first and second moments for different $E_\gamma$ thresholds above 1.9 GeV.
