

Abstract Submitted
for the APR08 Meeting of
The American Physical Society

Overview of recent D^0 mixing results from the Babar experiment JON COLEMAN, Stanford Linear Accelerator Center, BABAR COLLABORATION — During 2007 both BaBar and Belle surprised the physics community with unexpected results in charm-mixing. Since this time there has been several confirmations of this phenomena. We will present an overview of recent results from the BaBar experiment for the D^0 meson oscillating into its own anti-particle, (or vice versa).
