

Abstract for an Invited Paper
for the APR09 Meeting of
The American Physical Society

Communicating Science with the Arts

CHRISTOPHER CHIAVERINA, New Trier High School (retired)

The arts and science offer unique ways of viewing and understanding our world; however, they are not unrelated. The connections between these seemingly disparate disciplines are numerous and may serve as vehicles for teaching many topics in science, especially optics. This paper will examine a variety of activities that may be used to demonstrate linkages between optics and the arts.
