Abstract for an Invited Paper  
for the APR09 Meeting of  
the American Physical Society

**Advances in Superconducting Radio Frequency Science and Technology for Nuclear Physics<sup>1</sup>**

ROBERT RIMMER, JLab

SRF accelerator technology is a major enabling factor in present and proposed facilities for nuclear physics. Improvements in SRF cavity processing and new structure designs allow for significant upgrades of existing facilities and expand the possibilities for new ones. This paper reviews some of the recent developments in the field and their possible impacts.
