

Abstract for an Invited Paper  
for the APR09 Meeting of  
The American Physical Society

**Measurements of single top**

ELIZAVETA SHABALINA, II. Physikalisches Institut, Universität Göttingen

We present a status of the single top quark search at the Fermilab Tevatron proton-antiproton collider. We review multivariate techniques used by the D0 and CDF collaborations to separate a small signal from the background and present results obtained with their combination. We also present the searches beyond the standard model performed using single top events.
