

Abstract Submitted
for the APR09 Meeting of
The American Physical Society

Recent Studies of Nucleon-Nucleon Short-Range Correlations with $A(e,e'p)$ Reactions. SHALEV GILAD, Massachusetts Institute of Technology, PETER MONAGHAN, Hampton University, JLAB HALL-A COLLABORATION — The reaction $A(e,e'p)$ has been used extensively to study short-range nucleon-nucleon correlations. We shall review recent such studies at high transferred momenta, and will present new results from Hall A at the Jefferson Laboratory at $x_B > 1$ kinematics. In light of these results, we shall discuss the advantages and limitations of the $A(e,e'p)$ reaction for the purpose of studying short-range two-nucleon correlations.
