The mass, energy, space and time systemic theory-MEST DAY-ONG CAO, Beijing Natural Providence Science & Technology Development Co., Ltd — In solar system, the sun is the mass-energy center. The mass absorb the mass by the mass wave; the energy radiate the energy by energy wave. So the wave is around the sun. In dark hole system, the dark hole is the space-time center, the dark mass-energy is around it. The dark hole system is a negative systemic model to the solar system. So the dark atom is made up from the dark negative photon, the dark negative neutrino and the dark negative muon. The dark mass-energy is made up from the negative proton and the negative neutron. The negative proton mean that it take a negative density. The negative neutron mean that it take a negative pressure. When the dark mass-energy go into the solar corona, they can take a reaction with the neutrino.

$$n^- + \nu_e \rightarrow p + \mu \quad (1)$$

$$p^- + \nu_e \rightarrow n + \mu \quad (2)$$

Among it, n^- :the negative neutron of dark mass-energy, p^- :the negative proton of dark mass-energy, ν_e : electron neutrino, n: neutron, p: proton, μ : the muon. It can take the high temperature, large electromagnetic field and the Magnetic reconnection in the solar corona. And it can explain of the electron neutrino of sun lose in.
