

Abstract for an Invited Paper  
for the APR11 Meeting of  
The American Physical Society

**Science Diplomacy in Large International Collaborations**

BARRY C. BARISH, California Institute of Technology

What opportunities and challenges does the rapidly growing internationalization of science, especially large scale science and technology projects, present for US science policy? On one hand, the interchange of scientists, the sharing of technology and facilities and the working together on common scientific goals promotes better understanding and better science. On the other hand, challenges are presented, because the science cannot be divorced from government policies, and solutions must be found for issues varying from visas to making reliable international commitments.
