The American Physical Society

Considerations Concerning the Overall Unification SHANTILAL GORADIA, Gravity Research Institute, Inc. — The direction of the century old search, based on non-probabilistic gravity, for the unification of forces blockades the search for consciousness at the fundamental level. Probabilistic gravity deriving strong coupling from a quantum mechanically modified inverse square law of gravity, and derivation of the fine structure constants' $1/137$ by a computational route throw light on the quantum source of consciousness as explained in the book "Quantum Consciousness - The Road to Reality" by this author in more details. Uniformity of microwave background, spooky action, quantum tunnelling and other issues are natural consequences of nonlocal gravity. I will show how this constitutes a play on the shoulders of the giants and also on the imaginary dimensions of the string theory.
