Abstract for an Invited Paper  
for the APR14 Meeting of  
the American Physical Society

### **Higgs results from ATLAS**

GABRIELLA SCIOLLA, Brandeis University

This presentation reviews the most recent measurements of the properties of the Higgs boson performed with the ATLAS detector at the Large Hadron Collider. After providing an overview of how the individual decay channels are reconstructed, we will focus on the techniques used to measure the mass, cross-sections, couplings, spin and parity of the newly discovered particle in order to shed some light on its nature.
