

Abstract Submitted  
for the APR14 Meeting of  
The American Physical Society

**Measurement of beauty hadron spectroscopy and productions at CMS** REDDY PRATAP GANDRAJULA, The University of Iowa, CMS COLLABORATION — The large production cross-sections at LHC energies, combined with a adapted trigger strategy and good detector resolutions, has enabled CMS to collect large data samples and to perform detailed studies of Beauty hadron properties. In this talk we will report our latest results, including decay rate measurements from B hadrons and spectroscopy.
