CoffeeShop Astrophysics: An Adventure in Public Outreach

SYDNEY CHAMBERLIN, The Pennsylvania State University, MEGAN DECESAR, SARAH CAUDILL, LALEH SADEGHIAN, University of Wisconsin-Milwaukee, LAURA NUTTALL, Syracuse University, ALEX URBAN, CASEY MCGRATH, University of Wisconsin-Milwaukee — Engaging non-scientists in scientific discussions is inarguably important, both for researchers and society. Public lectures have long been utilized as a method for performing such outreach, but due to their format and location often reach a limited audience. More recently, events such as science cafés (events pairing a scientist with the public in a casual venue) have emerged as a potential tool for connecting with general audiences. The success of these events depends on multiple variables. In this talk, we describe an example of such an event entitled CoffeeShop Astrophysics, that uses multiple speakers, demonstrations and humor to successfully engage members of the public. We discuss the key elements that make CoffeeShop Astrophysics effective, and the viability of grassroots, coffeeshop-style outreach.
