Abstract for an Invited Paper
for the APR16 Meeting of
the American Physical Society

New Physics at the LHC

MICHELE PAPUCCI, Lawrence Berkeley National Laboratory

Recently ATLAS and CMS presented a possible in hint of physics beyond the Standard Model in the di-photon energy spectrum. While more data is necessary to confirm/disprove the excess, it triggered a lot of theoretical activity. I will review recent theoretical ideas that have been brought forth to explain the signal and comment on their implications for the next round of the LHC data taking.
