Abstract for an Invited Paper
for the APR17 Meeting of
the American Physical Society

New Frontiers in Dark Matter Detection

JESSE THALER, MIT

Dark matter, detected thus far only through its couplings to gravity, remains an enigma. It is therefore essential to pursue a broad portfolio of search strategies to test for non-gravitational interactions between dark matter and visible matter. In this talk, I give an overview of recent progress in detecting dark matter and related particles, ranging from ultralight axion-like particles to hidden sector dark forces.
