Abstract for an Invited Paper
for the APR17 Meeting of
the American Physical Society

First-principles calculation of hadronic contributions to the muon anomalous magnetic moment

CHRISTOPH LEHNER, Brookhaven National Laboratory

I will review recent progress on a first-principles calculation of hadronic contributions to the muon anomalous magnetic moment. I will include progress on both the hadronic vacuum polarization and the light-by-light contributions and outline a path to match the precision of next-generation experiments.
