Abstract for an Invited Paper
for the APR20 Meeting of
the American Physical Society

Spin physics at the Electron Ion Collider

ALEXEI PROKUDIN, Penn State Berks and JLab

The future Electron Ion Collider (EIC) will play a crucial role in our understanding of the structure of the building blocks of the visible universe, the proton and the neutron. We provide a concise presentation of the state of the art in the study of the polarized and three-dimensional structure of the nucleon, with particular emphasis on Transverse Momentum Distributions and the future studies at the EIC.
