The American Physical Society

**Measuring the Weak Charge Radius of  $\text{Pb}^{208}$  with PREX-II<sup>1</sup>**  
BRENDAN REED, CHARLES HOROWITZ, Indiana Univ - Bloomington, PREX-II COLLABORATION — Parity-violating electron scattering is a strong tool that can be used to probe the elusive neutron density in atomic nuclei. Recently, the parity-violating electron scattering experiment PREX-II made measurements of the weak charge radius of  $\text{Pb}^{208}$ . This measurement is a strong improvement over the results of the PREX experiment, now measuring the weak charge radius with an uncertainty of 1.4
