The American Physical Society

**Higgs Boson Measurements at FCC-ee** GREGORIO BERNARDI,  
LPNHE Paris, FCC-EE COLLABORATION — The FCC-ee, a lepton collider with  
center-of-mass collision energies between 90 and 365 GeV, is proposed to address  
key open questions of modern physics. The precision instrument is designed for the  
in-depth exploration of nature at the smallest scales, optimized to study the Z, W,  
Higgs and top particles with high precision. FCC-ee offers unprecedented sensitivity  
to study the Higgs boson. The focus of the presentation is on recent Higgs physics  
results.
