Abstract Submitted
for the DAMOP10 Meeting of
The American Physical Society

Preliminary study of the bremsstrahlung spectrum produced from 25 keV electron bombardment of Ar gas atoms JORDAN WATKINS, SCOTT WILLIAMS, Angelo State University — We report on the preliminary results of experiments performed using a recently-constructed 25 keV electron accelerator. The intent of the study is to confirm whether or not there is any so-called polarizational bremsstrahlung contribution to the resultant radiation spectrum produced using Ar gas targets.
