Non-equilibrium dynamics of an ensemble of 2D Fermi gases

HAILLE SHARUM, SCOTT SMALE, CHRISTOPHER LUCIUK, STEFAN TROTZKY, University of Toronto, TILMAN ENSS, Universität Heidelberg, ZHENHUA YU, Tsinghua University, SHIZHONG ZHANG, University of Hong Kong, JOSEPH THYWISSEN, University of Toronto — We study the dynamics of an ensemble of two dimensional Fermi gases near Feshbach scattering resonances. We begin our experiments with a weakly interacting or non-interacting gas and initiate strong interactions on a timescale that is fast compared to equilibration. We probe the evolution of the short-ranged part of the many-body wavefunction via radio frequency spectroscopy. Alternatively, we perform spin echo measurements to reveal the dissipative (spin diffusion) and reactive (Leggett-Rice effect) components of transverse spin currents.
