Abstract for an Invited Paper  
for the DAMOP20 Meeting of  
the American Physical Society

### **Quantum Control of Nanomechanical Structures**

AMIR SAFAVI-NAEINI, Stanford University, Department of Applied Physics and Ginzton Laboratory

In this talk I will present the development and experiments with chip-scale quantum systems that allow us to control the state nanoscale mechanical resonators. In particular, I will focus on schemes for performing quantum gates between these resonators, and present approaches for scaling up to larger system sizes. Recent experimental results will be presented.
