Abstract for an Invited Paper
for the DNP06 Meeting of
the American Physical Society

Nuclear Science for Stockpile Stewardship

EDWARD HARTOUNI, Lawrence Livermore National Lab

Stockpile Stewardship is based on our ability to make predictions in complex systems for which a number of physics disciplines are required: material properties at high temperature and pressure, high energy density physics and nuclear physics. This talk will provide an overview of the role of nuclear science, both physics and radio-chemistry, with respect to both short term and long term needs of stockpile stewardship.
