**Measuring Nuclear Effects on Neutrino-Nucleus Interactions  
with MINERvA** JORGE MORFIN, Fermilab, MINERVA COLLABORATION  
— Nuclear effects on neutrino induced interactions are expected to be different than those observed in charged lepton - nucleus experiments. A summary of these expected differences, an overview of the Kulagin-Petti model for neutrino-nucleus interactions and a description of the MINERvA measurement of nuclear effects will be presented.
