

Abstract Submitted
for the DNP07 Meeting of
The American Physical Society

MINERvA Experiment IRINA VERGALASOVA, Rutgers University,
MINERVA COLLABORATION — The MINERvA experiment at FNAL will make
a high statistics study of neutrino scattering on nuclei. One objective is to study
nuclear effects on the axial form factor using quasi- elastic scattering from carbon,
iron, and lead. We will present an estimate of the sensitivity of the detector to
changes in the form factor.
