

Abstract Submitted
for the DNP10 Meeting of
The American Physical Society

Neutrino Scattering Measurements with MiniBooNE REX TAY-
LOE, Indiana University, MINIBOONE COLLABORATION — The MiniBooNE
experiment at Fermilab has collected the world's largest sample of neutrino and
antineutrino scattering events in the 1 GeV energy region. The sample includes
charged- and neutral-current interactions from quasielastic and resonant channels.
Recent results are confronting existing models for neutrino scattering on light nuclei.
These results will be presented along with the latest interpretations.
