Abstract Submitted for the DNP12 Meeting of The American Physical Society

Inclusive Neutrino Cross Section Measurements at MINERvA¹ BRIAN TICE, Rutgers University, MINERVA COLLABORATION — MINERvA part 4. The knowledge of inclusive neutrino cross sections is valuable for neutrino oscillation experiments. Determination of the A dependence of the cross section can help determine the role of nuclear effects in neutrino scattering, which is poorly known and difficult to model. Preliminary ratios of cross sections on carbon, iron and lead will be shown.
