Status and Prospects of Electric Dipole Moment Measurements\textsuperscript{1}

VINCE CIANCILO, Oak Ridge National Lab

Precision electric dipole moment (EDM) measurements are extremely sensitive to non-Standard Model sources of charge/parity violation required for generation of the observed matter/anti-matter asymmetry in the universe. Many experiments in many systems are underway. In a half-hour talk it is difficult to do more than scratch the surface, but I will attempt to give a high-level overview on the various ongoing efforts.
