DNP20-2020-000693

Abstract for an Invited Paper for the DNP20 Meeting of the American Physical Society

## Fundamental Symmetries & Neutrinos: The Theory-Experiment Interplay.

MICHAEL RAMSEY-MUSOLF, T.D. Lee Institute/Shanghai Jiao Tong University Univ of Mass - Amherst

Experimental nuclear physics tests of fundamental symmetries and neutrino property studies continue to provide exciting opportunities for both discovery and insight into nature's fundamental interactions. I discuss recent theoretical developments and their implications for the interpretation of next generation experiments. I focus particularly on searches for neutrinoless double beta decay and electric dipole moments and precision tests of the Standard Model.
