

Abstract Submitted
for the DPP05 Meeting of
The American Physical Society

Comparison of thermal instability theory with MARFE density limit experiment in TEXTOR FREDERICK KELLY¹, MICHAEL TOKAR, Institut fuer Plasmaphysik, Forschungszentrum Juelich GmbH, Association FZJ-Euratom, 52425 Juelich, Germany — The density limits of shots in TEXTOR [Tokamak Experiment for Technology Oriented Research] that ended in multifaceted asymmetric radiation from the edge (MARFE) are analyzed with respect to several thermal instability theories²³⁴.

¹Supported by SFB 591 "Universal Behavior of Non-equilibrium Plasmas: Heating, Transport and Formation of Structures" of the German Research Society
