Observations of Macroscopic Shocks in the Laboratory¹

DOUGLASS ENDRIZZI, LAUREN LAUFMAN-WOLLITZER, MIKE CLARK, JOSEPH OLSON, RACHEL MYERS, CARY FOREST, University of Wisconsin-Madison, HIROSHI GOTA, Tri Alpha Energy, WIPAL TEAM, TRI ALPHA ENERGY TEAM — A magnetized coaxial plasma gun (MCPG) built by Tri Alpha Energy has been installed on the Wisconsin Plasma Astrophysics Lab (WiPAL) vacuum vessel. The MCPG fires a dense ($10^{18}m^{-3}$) and warm (10-30 eV) compact toroid (CT) at speeds of order 100 km/s. The CT is characterized using \dot{B} magnetic diagnostics, multi-tip temperature probes, Ion saturation density probes, and a fast Phantom camera. The CT is injected into vacuum field, neutral gas, and plasmas of various beta. Results and evidence for propagating shocks will be presented.
