Abstract for an Invited Paper  
for the HAW05 Meeting of  
the American Physical Society

**Hadron Spectra and Flow at Intermediate  $p_T$**

PAUL SORENSEN, Lawrence Berkeley National Laboratory

Measurements of identified particles from Au+Au collisions at various center-of-mass energies are reviewed. Emphasis is placed on hadron spectra, baryon-to-meson ratios, and elliptic flow at intermediate transverse momentum ( $1.5 < p_T < 5$  GeV/c). Possible connections between these measurements and the creation of a deconfined quark-gluon phase are presented.
