Adsorption on Carbon Nanotubes: A Transfer Matrix Method

ALAIN PHARES, Villanova University, DAVID GRUMBINE, JR., St. Vincent College, FRANCIS WUNDERLICH, Villanova University — The transfer matrix providing the thermodynamic properties of adsorption on nanotubes is recursively constructed and generalized to include the study of adsorption on nanotubes twisted to any order and of arbitrary diameter. Results are presented for hollow adsorption on carbon nanotubes.

1This research is supported in part by grant number PHY910014P from the Pittsburgh Supercomputing Center, supported by several federal agencies, the Commonwealth of Pennsylvania and private industry.
