

Abstract for an Invited Paper
for the MAR05 Meeting of
The American Physical Society

Phonon effects in molecular conduction junctions

ABRAHAM NITZAN, Tel Aviv University

This talk will give an overview of our work on effects of electron-phonon coupling on molecular conduction, including dephasing, dissipation and heating, then describe some recent observations, interpretations and predictions on three phenomena involving phonons in molecular junctions: (a) Heat conduction and its rectification by molecular wires^{1,2}; (b) inelastic electron tunneling spectroscopy³⁻⁵ and (c) phonon-induced multi-stability, hysteresis and negative differential resistance in molecular conduction.⁶ ¹ D.
