

Abstract Submitted  
for the MAR06 Meeting of  
The American Physical Society

**Magnetic properties of (R, R', R'',...)Ni<sub>2</sub>Ge<sub>2</sub> solid solutions** S.A. LAW, S.L. BUD'KO, P.C. CANFIELD, Ames Laboratory and Dept. of Physics and Astronomy, Iowa State University — Anisotropic magnetic properties of single crystals of (R, R', R'',...)Ni<sub>2</sub>Ge<sub>2</sub> (R = rare earth) solid solutions will be presented. Whereas the magnetic ordering temperatures and the paramagnetic  $\Theta$ 's broadly follow de Gennes scaling there are some systematic deviations from this oversimplified trend. In this talk we will examine these deviations and also discuss the apparent absence of a spin-glass state induced by random magnetic anisotropy for the most highly mixed samples.
