The American Physical Society

Light diffraction from a metallic bigrating.¹ RAUL GARCIA-LLAMAS, Departamento de Investigacion en Fisica. Universidad de Sonora, MANUEL LEYVA-LUCERO, Escuela de Ciencias Fisico-Matematicas. Universidad Autonoma de Sinaloa, JORGE GASPAR-ARMENTA, Departamento de Investigacion en Fisica. Universidad de Sonora — The diffraction of π - and σ - polarized electromagnetic plane waves from metallic bigratings is studied theoretically. The reduced Rayleigh equations are solved using a perturbation approach. The diffracted amplitudes are calculated until second order on the surface height profile. Numerical results of the diffraction orders and Near-Field are obtained using both, two-dimensional sinusoidal and semicircular profiles.
